Cortina CNC ®

The Cortina cutting machine has been a very successful addition to the Messer machine portfolio, serving its customers well for over a decade

The Cortina machines are still running well but the control panel is becoming obsolete, with spare part availability reducing and key components having a high replacement cost.

The new Cortina CNC is built with modern components and is plug compatible with old units making installation easy and downtime of machine is kept to a minimum

The new CNC can be used with existing drives or an upgrade to AC Digital Drives is available as an option.
