

Quicky E

MESSER 
Cutting Systems

The Quicky E makes flame cutting easy. Simple to handle, virtually anyone can learn to use this small, hand-held oxy-fuel cutting machine in no time at all.

That's because the Quicky E is easy to operate, ruggedly built and tremendously versatile. It gives you clean, burr free cuts every time and offers add-on facilities for additional cutting capabilities.

It adds up to the perfect flame cutting machine for a whole range of duties, ideal for applications which demand manoeuvrability and flexibility – in short, wherever a large machine is just too big for the job.

Quicky E is at home in every workshop - **more than 100,000 satisfied users** can testify to this.

The Quicky E is steered by hand for profile cuts; automatic straight line cuts are made either on guide rails or along steel angles. With the circle cutting attachment the Quicky E is also suitable for automatic circle cut outs.

Technical Data :

Workpiece thickness :	3 to 100 mm
Feedrate :	100 to 1000 mm/min
Diameter of circle cuts :	60 to 1,500 mm
Voltage :	230VAC 110V/42VAC options
Controls :	Forward/Reverse switch. Speed Potentiometer Mechanical free wheel clutch

Attachments :

1 metre track lengths (connectable)

Circle cutting attachment

Bevel cutting attachment

2nd Torch.
